

# Investigation 1 • Area of a Triangle

Name \_\_\_\_\_ Period \_\_\_\_\_ Date \_\_\_\_\_

**Step 1** Find the area of each triangle. Use Example A as a guide.

**Step 2** Generalize Step 1 to find the area of this triangle in terms of  $a$ ,  $b$ , and  $\angle C$ . State your general formula as your next conjecture.

## SAS Triangle Area Conjecture

The area of a triangle is given by the formula  
 $A = \underline{\hspace{2cm}}$ , where  $a$  and  $b$   
 are the lengths of two sides and  $C$  is the angle  
 between them.

## Investigation 2 • The Law of Sines

Name \_\_\_\_\_ Period \_\_\_\_\_ Date \_\_\_\_\_

Consider  $\triangle ABC$  with height  $h$ .

**Step 1** Find  $h$  in terms of  $a$  and the sine of an angle.

**Step 2** Find  $h$  in terms of  $b$  and the sine of an angle.

**Step 3** Use algebra to show

$$\frac{\sin A}{a} = \frac{\sin B}{b}$$

## Investigation 2 • The Law of Sines (continued)

Now consider the same  $\triangle ABC$  using a different height,  $k$ .

**Step 4** Find  $k$  in terms of  $c$  and the sine of an angle.

**Step 5** Find  $k$  in terms of  $b$  and the sine of an angle.

**Step 6** Use algebra to show

$$\frac{\sin B}{b} = \frac{\sin C}{c}$$

**Step 7** Combine Steps 3 and 6. Complete this conjecture.

### Law of Sines

For a triangle with angles  $A$ ,  $B$ , and  $C$  and sides of lengths  $a$ ,  $b$ , and  $c$  ( $a$  opposite  $A$ ,  $b$  opposite  $B$ , and  $c$  opposite  $C$ ),

$$\frac{\sin A}{a} = \frac{\sin B}{b} = \frac{\sin C}{c}$$
